

Introducing Origo's 4th Generation PhaseID System

- ▶ Simply purchase a G4 Field Probe, use our Smartphone App, and obtain reference phase from Origo's worldwide Base Server network.
- ▶ The G4 System is not just another model. It is an entirely new phase identification concept.
- ▶ Using a modern "Software Defined" architecture, the hardware doesn't change.
- ▶ Future new features and phasing capabilities are implemented simply by upgrading the App and Server software.
- ▶ The App works with all previous Origo Field Probes including the hundreds of Lineman Field Probes still in use.
- ▶ The G4 Probe is the last Field Probe model you will ever have to purchase.

System Features

- Smartphone App based system is very simple and intuitive to operate.
- Setting up Tagging Reference Phase is trivial.
- All measurement data (phase, GPS location, time, setup, etc.) is recorded on the Smartphone and can be downloaded, uploaded, or sent to others.
- Attach any text, voice, photo, or video clips desired to any phase measurement.
- Fully redundant reference phase network. If current Base Coupler is not operating, simply select another.

Initial Phasing Capabilities

- Non-contact proximity phase measurements on all primary single & 3-phase circuits, and on all secondary circuits including residential meters.
- Phase URD dead front elbows, 3-phase URD feeder cables buried in a trench, and underground lead shielded feeder cables using current adapter.
- Determine URD elbow connectivity between junction cabinets and padmounts.

Phase selected crowded circuit situations like underbuild without having to attach probe to an extendo stick.

G4 System Planned Upcoming Phasing Capabilities

- ▶ Real-time phasing anywhere on the planet using Iridium GO!
- ▶ Determine connectivity between URD cable in a trench and cabinets.
- ▶ Lightweight drone ready model to allow phasing isolated hard to reach circuits.
- ▶ Phase selected complex circuits from ground level using circuit models to avoid having to use an extendo stick.

Origo PhaseID System

- ✔ Since 2003, Origo's hundreds of PhaseID units are still in active use worldwide and supported.
- ✔ **Go with the leader - not with the followers.**
- ✔ Why wait years for others to copy Origo's innovations when you can obtain and use them immediately.
- ✔ Lowest cost and greatest capability of any phase identification system available.

**Call Origo Corporation at (480) 473-1995
for complete information on this labor-saving tool.**
